Detailed Action

Examiners Amendment

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Robert Perez on 9-21-2005. The changes made below are underlined.

The Claims are amended as follows;

-- Claim 13. (Currently Amended) An integrated circuit device manufacturing method comprising:

projecting a patterned projection beam of radiation onto a target portion of a layer of

radiation-sensitive material on a substrate;

detecting one of:

sounds caused by the passage of pulses of radiation of said projection beam; and

~~vibrations in an object on which said projection beam is incident, and~~
sounds emitted by an object on which said projection beam is incident, and

in response to the detecting, calculating a radiation energy per unit area at substrate level and controlling the radiation energy per unit area delivered by said projection beam to said substrate during an exposure of a target portion.--

Examiner's statement of reasons for allowance

2. Claims 1, and 3-14 are allowed.

The following is an examiner's statement of reasons for allowance:

3. Claims 1 and 13 are allowed because prior art fails to show a lithographic projection apparatus comprising: a radiation system to provide a projection beam of radiation; a support structure adapted to support patterning structure which can be used to pattern the projection beam according to a desired pattern; a substrate table to hold a substrate; a projection system to project the patterned beam onto a target portion of the substrate; an acoustic sensor constructed and arranged to detect sounds caused by the passage of pulses of radiation of the projection beam; and a controller in communication with said acoustic sensor and responsive to an output signal of said acoustic sensor, wherein said controller is configured to calculate a radiation energy per unit area at substrate level and to control said radiation energy per unit area delivered by said projection beam of radiation to said substrate, in response to said output signal of said acoustic sensor.

4. Claims 3-12, and 14 are allowed by virtue of their dependency upon allowed claims 1 and 13.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should

preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
